How To Start a Fire: fireplace

Fatwood is safe, quick and easy to use. It's 100% All Natural with no chemicals or additives of any kind. Only 2 sticks are needed to start a fire.

1

Place 2 sticks crisscrossed on a grate so that the flame will move up the sticks.

2

Place seasoned split firewood on top of the Fatwood Firestarter sticks, trying to leave some room between the Fatwood and firewood to allow for airflow.

3

Light one of the ends of each Fatwood stick.

4

Be sure to replace the screen in front of the fireplace.
