How To Start a Fire: **barbecue grill**

Fatwood is safe, quick and easy to use. It's 100% All Natural with no chemicals or additives of any kind. Only 2 to 3 sticks are needed to start a fire.

1

Arrange lump charcoal or briquets to form a pyramid. Insert 2 to 3 pieces of Fatwood Firestarter throughout so that the ends of the wood stick out 1 to 2 inches from the charcoal pyramid.

2

Light the ends of the Fatwood Firestarter sticks and leave the fire uncovered. (For approximately 10-15 minutes)

3

When coals are ashed over and Fatwood sticks have completely burned, it is safe to begin cooking.

4

Taste the difference that cooking with All Natural Fatwood Firestarter and All Natural Charcoal can make.

CAUTION-FLAMMABLE: Be very careful when starting any fire. Keep out of reach of children. Never leave any fire unattended. When storing Fatwood, keep it away from fire and open flame. Never cook over burning sticks; let them burn out first. Be sure chimney damper is open and ensure adequate air supply at all times. Always use fireplace screen.
